

Krishna Mishra

(Software Engineer II)

📞 9967635196 ✉️ mishrakrishna296@gmail.com 🔗 <https://www.linkedin.com/in/isitkrishnamishra>

🎯 Objective

Application Support / Application Analyst with 2.5+ years of experience across L1/L2 technical support, system analysis, and **stakeholder coordination**. Promoted internally for consistent performance and ownership in managing production incidents. Strong in SQL-based issue validation, **Root Cause Analysis** (RCA), UAT support, and process documentation to improve **SLA compliance** and reduce repeat incidents. Experienced in working closely with cross-functional teams to ensure application stability and reliable operations.

📖 Education

Thakur institute of management studies development and research

Master's in computer application
6.66 cgpa

2023

Thakur College of Science and commerce

Bachelor's in information technology
6.72

2020

👜 Experience

Homeville consulting Pvt Ltd

Software Engineer II

2025 - Present

- Act as a primary application support and analysis point for production issues affecting internal users and external stakeholders.
- Analyze 20–30+ incidents per week, converting findings into structured defect descriptions and functional clarifications in Jira.
- Collaborate with Product, Engineering, QA, and Customer Support teams to support incident resolution and release validation cycles.
- Execute SQL queries to validate data discrepancies, helping reduce false-positive incidents by ~15–20%.
- Support UAT activities by preparing validation scenarios, testing fixes in lower environments, tracking defects, and confirming release readiness.
- Perform Root Cause Analysis (RCA) for recurring issues, contributing to a ~25% reduction in repeat incidents over multiple release cycles.
- Maintain and update SOPs, runbooks, and incident documentation, reducing average onboarding and handover time by ~30%.
- Monitor SLAs, MTTR, and ticket aging, contributing inputs to triage and operational dashboards used in daily reviews.

Homeville consulting Pvt Ltd

Technical support engineer

2023 - 2025

Provided L1/L2 application support for business-critical systems ensuring SLA compliance.

- Performed trend analysis, converting patterns into enhancement requests.
- Authored RCA docs, partnered with QA/Engineering.
- Built and maintained knowledge base and onboarding guides.

Key Wins:

- Introduced escalation workflow improving CSAT.
- Created Known-Error DB reducing repeat incidents.
